

Your baby may have been shaken if he or she is:

- Irritable
- Sleeping too much
- Less alert
- Pale or has bluish skin
- Vomiting
- Not sucking or swallowing well
- Unconscious
- Having seizures
- Not breathing

If you think that your baby has been shaken, don't wait. Get medical help right away.

Never Shake A Baby

Frustrated? It's Normal

All babies cry! It's okay. Crying is one way your baby can tell you what she needs. It's normal for babies to cry from two to four hours a day. But even though you know crying is normal, it can still be stressful.

Learning how to help calm a crying baby can help you feel like a better parent. Responding to the signs your baby gives will also help your baby develop in important ways.

Use the Checklist: Baby Calming Tips

- ✔ **Hungry?** Breastfeed or give your baby a bottle.
- ✔ **Burp?** Burping makes your baby feel better.
- ✔ **Diaper?** Make sure baby is comfortable.
- ✔ **Tired?** Hold or cuddle your baby.
- ✔ **Just needs to cry?** Your baby may need to cry to settle down.
- ✔ **Sick?** Check your baby's temperature.
- ✔ **Bored?** Rock, walk or go for a ride.
- ✔ **Too much activity?** Move the baby to a quiet room.

Have a Plan

All babies cry and a crying baby can be stressful. So you should have a plan. A plan will help you stay calm if you've tried everything and your baby is still crying. The plan will change as your baby changes.

Take care of yourself so you can take care of your baby. These calming activities can be part of your plan:

- **Breathe.** Take some deep breaths to help reduce feelings of anger and tension.
- **The 10-foot rule.** Place your baby in a safe place and walk 10 feet away until you have calmed down
- **Take a break.** Gently lay your baby down on her back and take a break.
- **Talk to someone.** Call a friend or a relative who will listen and be caring. It can help to share your thoughts and feelings.
- **Go for a walk with your baby.** A simple walk around the block can help calm both you and your baby.

If you need help or are at a breaking point, call:

- **911**
- Children's Hospital Resource Line at **(206) 987-2500** or toll-free **(866) 987-2500**
- Parent Trust Family Help Line at **(800) 932-HOPE (4673)**

Share your Plan

Share your plan with everyone who cares for your baby. Encourage your baby's other caregivers to come up with their own plan. Make sure they know that shaking a baby can cause lasting injuries and even death. Tell them to call you anytime if they become frustrated or have concerns.

Remind yourself that you are doing the best you can.

You can't make a baby stop crying. When you've tried everything, and you don't know what else to do, give yourself a pat on the back for trying.

*Share your plan
with everyone who cares
for your baby.*

Daily routines help babies feel safe because they know what to expect.
